My “Draw a Rectangle and find Area” Project

My project, “Draw a Rectangle and find Area”, is programmed in HTML and JavaScript. It is a simple application that takes in three user inputs: color, length, and width. Once these inputs are selected, the user hits the “Draw it!” button. The rectangle is then drawn in a box below with the color, length, and width with the user selected. My project also displays the area of the rectangle for the user below the drawing.

Length	Width
<input type="text" value="20"/>	<input type="text" value="40"/>

Color
<input type="text" value="pink"/>
